

SSP Data Services

Solutions for the seamless transfer of your data.

Data quality and integrity are key to the effective management of your business – something reflected in SSP Data Services.

Your challenge.

Whether you're replacing an existing IT system or gradually integrating an acquisition that's running a different system to yours, moving data from one system to another or merging two sets of data can be a long, costly and disruptive process. The key challenge is to minimise the risk of disruption to your business and ensure a smooth migration process that allows you to get back to business – quickly and seamlessly.

Your solution: SSP Data Services.

When it comes to the migration of your data, SSP Data Services has one clear objective: to transfer as much information as possible, as quickly as possible. This benefits your business by protecting your assets and by causing the least amount of disruption.

Data quality and integrity are key to the effective management of your business – something reflected in SSP Data Services. For all SSP Swift implementations, we offer a number of data migration options to suit your requirements and budget.

- Data Import Wizard.
- Swift Staging Database.
- Bespoke Data Migration.

In addition to migration, SSP Data Services can offer a comprehensive data-cleansing solution tailored to your needs.

Simple is better than complex.

Save time and money by reducing the preparation work required for the data migration.

Service features.

- Dedicated data transfer team.
- Proven capability with data transfers undertaken for leading banks and financial advisers.
- Full data audit.
- Comprehensive data migration.
- A flexible approach, taking data from multiple source systems including 1st, Intelliflo, Quay, Plum, Fairs, True Potential – or seeding directly from product providers.

Key benefits.

- Save time and money by reducing the preparation work required for the data migration.
- Minimise data re-keying by increasing the amount of data that can be transferred.
- Minimise down-time in the business by reducing the actual data transfer time between systems.
- Validation of data to make sure it's intact and up-to-date.
